

Bucket Mann™

◆ Function

Bucket Mann™, U.S. patent pending, is a 5-gallon, graduated, high-density polyethylene container with a handle that can be used for sample collection and transportation. There are no edges that will catch solids and a large opening that allows for easy cleaning. Compared to other sample containers, the Bucket Mann™ will appeal to the cost-conscious user.

Bucket Mann™ is offered with two polyethylene covers. One cover is considered a "splashguard" for use during sampling. The splashguard has an opening that will accommodate the bottle-full sensor and sampling hose and still prevent splashing. This splashguard can be stored in the refrigerator (for stationary units) or the chassis bottom (for portable units) when the bucket is being used for transport. The second cover is a "transport lid". The transport lid is easy to snap in place or remove and requires no tools. It allows the user to easily transport samples from the site to the lab. When not in use, the transport lid can be stored in the refrigerator or chassis bottom.

Bucket Mann™ is for composite applications and fits any Manning refrigerator as well as sampling systems offered by other manufacturers. Bucket Mann™ may be used with most stationary units (Manning Models: S-5000, VSR & YB) and most portable units (Manning Models: VST & PST). You will find the Bucket Mann™ to be a useful accessory for your sampling needs.

Fits in any Manning refrigerator for use as a large or composite sample container. Opening will accommodate a bottle full sensor.

The Cool Mann Jr.™ is an insulated wrap for the Bucket Mann™ that forms a radiant barrier to aid in maintaining temperature during transport. If you have multiple sites, Cool Mann Jr.™ may enable you to make one trip, instead of several. Please see the Cool Mann Jr.™ data sheet for more information.

◆ Dimensions

5-gallon Bucket: 15 in. (381 mm) tall × 12 in. (305 mm) diameter*

*All dimensions are approximate and do not include handle.
